hubzion.net

Hi all,

Been taking time to see why and I am sure it might be something that is broken on my side but I need to ask.

When I started this hub last November I somehow did not manage to get the privacy groups right. I can create them and post to them but the posts always seem to be public, never to only those who are in a specific group.

This evening I made a test channel to see if it has the same behaviour. It does.

I did not alter anything in the code and I updated recently. Is there anything I might be able to check?

weniger anzeigen 20 Kommentare

And I tested the Allow, seems to do nothing at my hub.

To give some additional info. I think deleting old groups might not be deleted if you delete them in the interface. Is it safe to delete all groups in the database and the members in the other table? Would I need to simply make sure pgrp 1 is kept?

```
select * from pgrp
-> ;
+-----+-----+-----+-----+-----+
| id | hash | uid | visible | deleted | gname |
+-----+-----+-----+-----+-----+
| 1 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxFriends | 2 | 0 | 1 | Friends |
| 2 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxTech | 2 | 0 | 0 | Tech |
| 3 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxPluspora | 2 | 0 | 1 | Pluspora |
| 4 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxPhoto | 2 | 0 | 1 | Photo |
| 5 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxFun | 2 | 0 | 1 | Fun |
| 6 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxSecurity | 2 | 0 | 1 | Security |
| 7 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxNews | 2 | 0 | 1 | News |
| 8 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxtest | 2 | 0 | 1 | test |
| 9 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxAP | 2 | 0 | 0 | AP |
| 10 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxDiaspora | 2 | 0 | 1 | Diaspora |
| 11 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxPublic | 2 | 1 | 1 | Public |
| 15 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxNederlands | 2 | 0 | 1 | Nederlands |
| 18 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx | 2 | 1 | 0 | Feed |
| 19 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx | 2 | 0 | 1 | Dutch |
| 20 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx | 2 | 0 | 0 | Diasp |
| 21 | xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx | 8 | 0 | 0 | Friends |
+-----+-----+-----+-----+-----+
```

And the last info:

I altered the database to get them all in one group (Friends 1), set deleted to 0 and deleted the other groups. In the pgrp_members I've set all users to that one group. It all does not help. The delivery report is sending out the posts to all persons afaik and there is no lock icon when I compose the post in the preview. Neither in test posts.

Could it be that the selector has/had a similar problem as in Friendica? I've see they fixed an issue with it.

I assume this is going to be a hard one. They only thing I can think of that there is something wrong in the database. I

doublechecked by setting up a new directory and connecting to the same database with the old config. Same problem.

Does anyone have an idea?

Thanks for all the answers, found the solution....

As for those curious, it was indeed a setting I did not set correctly. Site -> Privacy settings -> advanced....

The top setting was set to anybody on the internet. I can post in seperate groups now. Is anyone able to tell me how I would be able to post publicly too without loosing this?

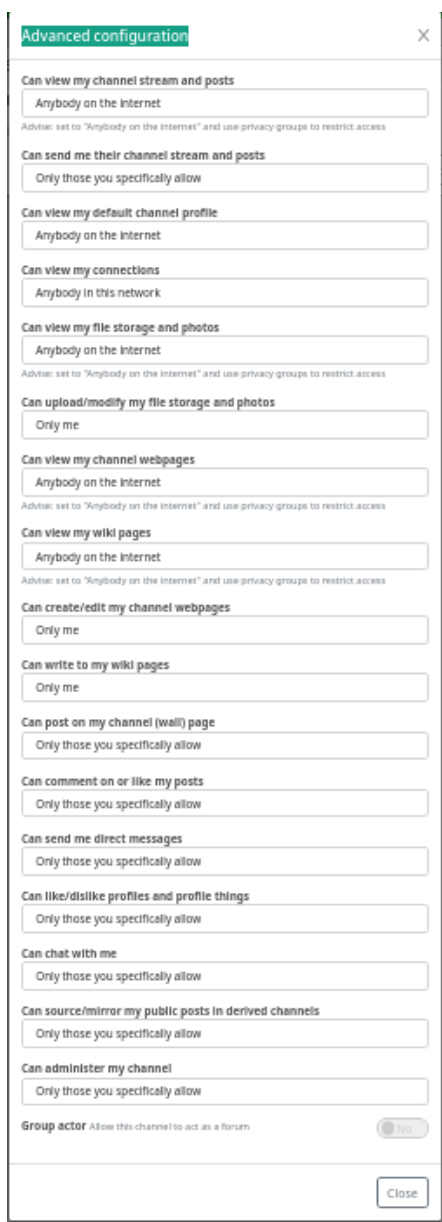

@Hans You have got answers??

I don't see any answers ...

Thanks for all the research being done and feeding it back here. This is something that goes way over my head, so I think thus is more for devs like @Mario Vavti or @Max Kostikov to look into. Sorry I cannot be of much help.

@Hans you should not do this. Can you post a screencast of how you select the privacy group when posting?

This is my current setting. I was using those I allow and a personal profile but that disables public postings and people from one privacy group can see the posts of groups where they are not enlisted.

The screenshot shows a dialog box titled "Advanced configuration" with a close button (X) in the top right corner. The dialog contains several settings, each with a title and a dropdown menu:

- Can view my channel stream and posts:** Anybody on the internet. Advice: set to "Anybody on the internet" and use privacy groups to restrict access.
- Can send me their channel stream and posts:** Only those you specifically allow
- Can view my default channel profile:** Anybody on the internet
- Can view my connections:** Anybody in this network
- Can view my file storage and photos:** Anybody on the internet. Advice: set to "Anybody on the internet" and use privacy groups to restrict access.
- Can upload/modify my file storage and photos:** Only me
- Can view my channel webpages:** Anybody on the internet. Advice: set to "Anybody on the internet" and use privacy groups to restrict access.
- Can view my wiki pages:** Anybody on the internet. Advice: set to "Anybody on the internet" and use privacy groups to restrict access.
- Can create/edit my channel webpages:** Only me
- Can write to my wiki pages:** Only me
- Can post on my channel (wall) page:** Only those you specifically allow
- Can comment on or like my posts:** Only those you specifically allow
- Can send me direct messages:** Only those you specifically allow
- Can like/dislike profiles and profile things:** Only those you specifically allow
- Can chat with me:** Only those you specifically allow
- Can source/mirror my public posts in derived channels:** Only those you specifically allow
- Can administer my channel:** Only those you specifically allow
- Group actor:** Allow this channel to act as a forum. No

A "Close" button is located at the bottom right of the dialog.

If you guys indeed can confirm then we at least know what the problem is/was

And @RockyIII also found additional info on my hub:

Zustellungsbericht für b6a507a0-a457-4655-a114-0045603cc81b...
federate.hopto.org signature invalid 2022-04-30 12:51:41

I am not sure how to fix this to be honest. Can this be legacy from when I imported users a long time ago?

@Hans you should never ever need to play with the advanced privacy settings to be able to post to a privacy group...

@Mario Vavti

That was what I understood but I started to look there since it was not working like expected. Please see my comment about uBlock. I think that mainly was my problem. It is good for other users to know too.

The only thing that remains might be what @RockyIII stated about the invalid signature.

@Hans

You comment about ublock? where?

RockyIII stated something about invalid signature? where?

Are these comments somewhere else? I do not see these comments.

@Aksel Kies Linc @Hz The comment about ublock is in this thread. Once I disabled it on my hub (I am using Firefox on Linux b.t.w.) most problems did get solved. It blocks part of the dom (document)

@Aksel Kies Linc @Hz And as for the invalid signature, it was seen on a test posting I did.

@Hans I still don't see another comment with "ublock". I checked twice! Not in my timeline and not direct on zotadel.net.

Am I blind or is there a technical issue?!?

@Aksel Kies Linc @Hz Well, if I look at this entire posting I do see it:
